

**Primers
Adhesion promoters**

TRAPYLEN® and TRAPUR®

Primers and adhesion promoters for plastics which are difficult to coat – such as PP, TPO, PES ...

Polymer basis

Low chlorinated polyolefins (CPO)

Chemically modified polyolefins (APO)

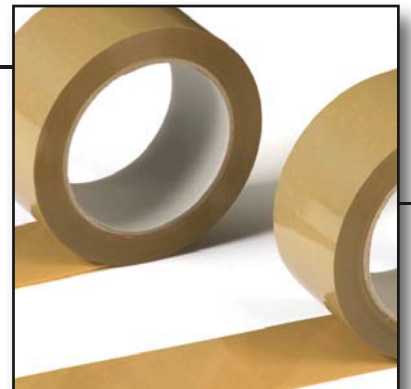

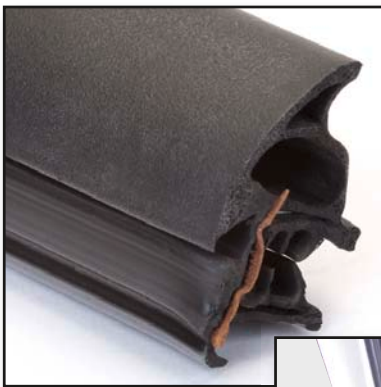

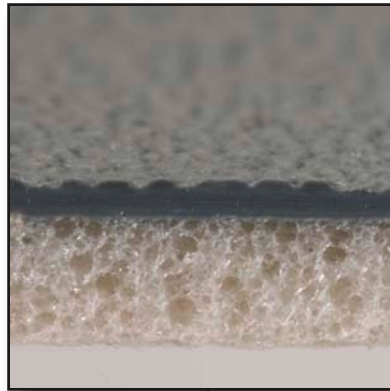

Polyurethanes (PU)

Delivery forms

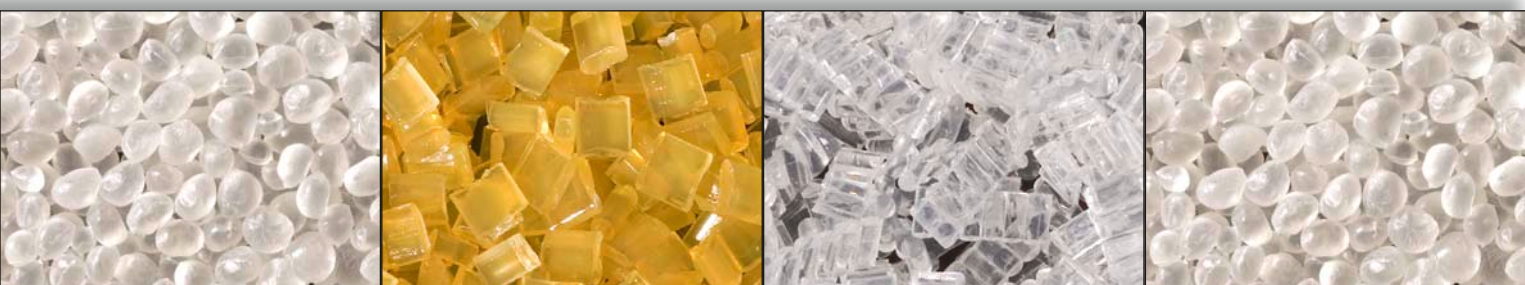

- solid resins
- solventbased systems
- waterbased dispersions
- UV cross-linkable systems, liquid

Market / Applications	Cars	Industry	Others
Coating of plastic parts	Bumpers Panels	Bodies	Garden furniture Mobile phones
Coating of sheets, foils, fabrics	Dashboards Sun visors Baryte foils	Floor covers Conveyor belts	Skis Deco foils
Additives for printing inks Profile coating Bonding	Sealing profiles Operating elements	Packaging Packing Adhesive tapes	Advertising posters

TRAMACO GmbH was founded in 1973. In the beginning trading with chemical specialties was the main focus. Nowadays TRAMACO's main activity is the marketing of their own manufactured products. Thanks to a broad range of high quality basic raw materials from strong suppliers, proprietary specialties from its own production as well as competent technical service TRAMACO is a reliable partner for users of chemical foaming agents, adhesion promoters and additives.

Since 1979 TRAMACO has been a member of the ROWA GROUP. The use of joint resources in development, sourcing, production and marketing provides synergistic effects and thus makes TRAMACO nowadays a strong partner within the ROWA GROUP.

Apart from the primers and adhesion promoters TRAMACO markets chemical foaming and nucleating agents under the brand names TRACEL® und UNICELL®.

All endothermic and exothermic foaming agents are available in pure form or as modified preparations, designed for optimum performance in different applications. Customized products are available upon request.

TRACEL® und UNICELL® products are used in the thermoplastic and rubber industries to reduce weight, increase dimensional stability and

improve thermal and acoustic insulation properties of finished articles. Examples are lightweight plastic sheets, insulation hoses, sponge rubber etc.

The product delivery forms vary from powders to pastes and granulated polymer and elastomer bound masterbatches.

In addition TRAMACO produces granulated polymer bound masterbatches of special additives for the plastics industry, like flame retardants, slipping and crosslinking agents, antistatics, UV-stabilizers, etc.
